OREZ and Corporate Carbon Forge Strategic Partnership to Unlock New Value in Organic Waste Processing

OREZ is proud to announce the signing of a Memorandum of Understanding (MOU) with Corporate Carbon, a leading innovator in carbon credit generation and environmental solutions. This strategic partnership will enable OREZ to offer clients new pathways to enhance the environmental and financial performance of their organic waste processing projects.

As Australia's leading provider of end-to-end solutions for organic waste processing, OREZ is committed to driving sustainable innovation. Our collaboration with Corporate Carbon expands this commitment by integrating carbon credit expertise into our service offerings. By working together, we will explore opportunities for clients to register their facilities for Australian Carbon Credit Units (ACCU) and voluntary carbon credits, unlocking additional revenue streams while contributing to emissions reduction targets.

Corporate Carbon brings deep expertise in carbon project development, having successfully delivered numerous projects that generate measurable and verifiable emissions reductions. Their experience in navigating the regulatory landscape and maximizing carbon credit potential makes them the ideal partner to complement OREZ's engineering, procurement, and construction capabilities.

"We have a long history of working with the waste sector to assist in reducing waste going to landfill and creating carbon credits," said Gary Wyatt, Managing Director, Corporate Carbon. "We are excited to now be partnering with OREZ, a leading solution provider to the sector, to take this to a new level. Providing guidance on emissions reduction opportunities, project establishment and policy, we look forward to supporting OREZ's clients to participate in the carbon market and earn new revenue streams from their projects and facilities. Together we seek to carve an innovative pathway for businesses across the sector to achieve environmental and financial success."

This partnership underscores OREZ's dedication to helping businesses turn organic waste into valuable resources—not just through high-performance processing infrastructure but also through access to financial incentives that reward sustainable operations. With Corporate Carbon's support, our clients will be better positioned to capitalize on the economic and environmental benefits of carbon credit markets.

"This collaboration with Corporate Carbon represents a significant step forward for our clients," said Max Bergomi, Chief Executive Officer of OREZ. "By integrating carbon credit opportunities into our projects, we can provide a more comprehensive solution that enhances sustainability and delivers tangible financial returns."

Both OREZ and Corporate Carbon are excited about the possibilities this partnership presents. Over the coming months, we will be working closely to identify and implement carbon credit strategies that align with our clients' operational goals.

Stay tuned for further updates as we bring this partnership to life and continue driving innovation in waste management and carbon solutions.
